

EAS30

CUSTOM-FIT

- Triple, balanced armature driver design
- Patent pending replaceable ambient technology
- High fidelity filter allows you to hear your ambient environment

Overview

Hearing is everything to a musician. Until now, musicians have had to choose between enjoying a dedicated in-ear monitor mix, or an ambient experience. With Westone's exclusive ambient technology, you can enjoy full-range frequency response from the monitor mix, hear your surroundings and engage with your fellow performers and audience like never before. The EAS30 features three proprietary balanced-armature drivers with a three-way passive crossover, developed specifically to increase sonic detail and clarity. The soundstage features powerful lows, articulate mids and crystal-clear highs that are sure to meet the needs of any musician or music lover. Combine the performance of three balanced-armature drivers with our ambient technology, and the result is an in-ear monitor that has the performance, power and output for any stage, from a small venue to the world's largest arenas. Let the world in, and set the stage for the best performance of your life.

IDEAL FOR: Performing Musicians/On-Stage Monitoring/
Personal Listening

Tech Specs

Sensitivity	124dB SPL @ 1mW
Frequency Response	20 Hz - 18 kHz
Impedance	56 ohms @ 1 kHz
Passive Noise Attenuation	10dB, 16dB, 20dB, 24dB, or 27dB
Driver	Three balanced armature drivers with three-way crossover
Cable	MMCX Audio™ Twisted Cable
Cable Length	52" / 132 cm

Westone Custom-Fit Technology

Fully custom earpieces are cast, sculpted, and polished by hand from actual impressions of your ears, resulting in the best fit and acoustic seal possible.

Precise Acoustic Symmetry

Left and right earpiece responses are matched to an extraordinarily tight +/- 2dB tolerance extends well beyond typical in-ear solutions.

Replaceable Filter Technology

Westone puts you in control of your ambient experience. With replaceable filters, you can pick your level of attenuation with 10dB, 16dB, 20dB or 24dB filters as well as the included 27dB solid plug.

Balanced Armature Drivers

Westone's balanced armature drivers are significantly more compact and efficient than traditional dynamic drivers. By combining multiple balanced armature drivers with sophisticated crossover networks, Westone monitors provide enhanced sonic detail and frequency range that extends well beyond typical in-ear solutions.

Flex Canal

A body temperature-reactive, semisoft earpiece canal additive that stays firm at room temperature for ease of insertion and then softens at body temperature, allowing increased comfort and acoustic seal for incredible noise isolation.

Cold Pour Acrylic

Earpiece housings are cold-poured in acrylic for a thicker, more resilient acoustic enclosure. Expect increased durability, a more controlled response, and a lustrous appearance from this Westone technology.

Deep Open Bore

The Deep Open Bore design provides a smoother transition between the monitor mix and the ambient sound, while also increasing comfort and acoustic seal.
